

## Mobile Pressure Washer Trailer Units

### Powder Coated Steel Frame:

The frame is constructed with a heavy-gauge steel structural tube spine for extra rigidity.

### Suspension:

Torflex axles deliver up to 300% more wheel travel than leaf spring axles to create a smooth ride over rough terrain. This adds to the life of your power washer and reduces fatigue on your tow vehicle. Electric brakes are optional on single axle and standard on tandem axle units.

### Tank:

Choose from trailers with 200 gallons up to 540 gallons of water storage. Exclusive seamless polyethylene supply tanks with hold down straps provide secure water storage. Dual tanks on the 400 and 540 gallon trailer provide baffling to reduce water sloshing and also allows for the water tank to be split to carry two different types of fluid.

### Lights/Wiring:

Tail lights are water tight sealed and recessed for added protection from road hazards. All wiring is routed through the trailer spine to eliminate damage from road hazards. Electric brake trailers have a brake controller ready 7-prong plug.

### Storage:

The integrated storage tube for spray wands and large (47"x22"x10") storage box at the rear of the trailer offers ample area to store wands, hoses and other accessories.

### Coupler/Chains/Jack:

Save time every time you hook up the trailer to your tow vehicle with an oversized wheel that allows for easy movement of the trailer. All trailers include safety chains and a wheeled jack that quickly swings up and out of the way.

### Water Filter/Valves/Hoses:

High capacity water filter with 1½" water drain valve supplies clean water to the pump to increase pump life. Complete plumbing and hoses, sized properly for the pressure washer, are included. Hoses are routed through grommets in the trailer frame to protect from chaffing and road hazards.

### Accessories/Options to make your trailer meet your specialized needs (includes but not limited to):

3-way ball valve, winterizing systems, stainless hose reels, light bar, bucket/chemical rack, chrome wheels, machine cover, sand hopper, chemical tank, alternate hitch choices, additional storage options.

*Many variations and sizes available, Contact us to discuss.*
